There are two types of crown, a normal crown and a screw-lock type crown.

1. If the watch is used without being wound up fully, gain or loss of the watch may result. To avoid this, it is recommended that you wear the watch for at least 8 hours each day.

2. Please note, however, that, as Lumibrite emits the light it stores, the luminance level of the light decreases gradually. (It may decrease by 20% in 2 to 3 hours, and by 80% in 3 to 5 hours.)

3. When repairing your watch, please keep in mind that if original parts are not available, parts may be replaced with equivalent substitute parts. For repairs services after the guarantee period has expired, if the functions of the watch can be restored by repair work, we will undertake repairs services upon request and payment.

4. Periodic inspection and adjustment by disassembly and cleaning (overhaul) is recommended approximately every 3 to 5 years. When asking for inspection and adjustment by disassembly and cleaning (overhaul), make sure that the gas-tightness of the watch case is not disturbed.

5. If your watch has Lumibrite, Lumibrite is luminous pastel color that allows the light energy of the sunlight and lighting apparatus in a short time to charge. For example, if exposed to a light of more than 500 lux for approximately 10 minutes, Lumibrite can emit light for 8 to 10 hours.

6. Please note, however, that, as Lumibrite emits the light it stores, the luminance level of the light decreases gradually. (It may decrease by 80% in 3 to 5 hours.)

7. Before disassembly and cleaning (overhaul), make sure that the gas-tightness of the watch is not disturbed.

8. For repairs services after the guarantee period has expired, if the functions of the watch can be restored by repair work, we will undertake repairs services upon request and payment.

9. The water resistance of the watch is confirmed before disassembly and cleaning (overhaul). For replacement of parts, please specify "SEIKOGENUINE PARTS."
