How to adjust the easy-adjust band

This band has an easy-adjust mechanism to allow you to easily adjust the length of the band yourself. Before starting adjustment of the band length, please read the instructions carefully.

**WARNING**
- Handling of small parts
  - When removing links, pins or spring bars, please make sure to keep parts out of the reach of infants and young children. If parts are accidentally swallowed, seek medical attention immediately.

**CAUTION**
- When adjusting the length of the band, please be careful not to hurt your hands or fingers with the pins, spring bars at the edge of the tool.

### Before starting
- Only the links marked with an arrow on their underside are removable. The connecting part between a link with an arrow and a link without an arrow cannot be removed.
- The parts used for adjusting the band length such as pins and spring bars are very small. To prevent loss of parts, while you are working, place a soft cloth on the work surface before starting and place the parts on the cloth.
- Please follow the instructions carefully as rough handling of the parts (pins and spring bars) may cause deterioration of the parts.
- Do not remove the parts for purposes other than the length adjustment as parts might be lost or distorted if they are repeatedly attached or removed.
- Parts of the band (pins and spring bars) are identical. Parts used for the removed links can be used as replacements for lost or distorted parts.
- The design of the band shown in this instruction manual may differ slightly from the band of the watch you purchased. Even in this case, you can still follow the instructions because the structure of the band and its connecting parts are the same.

### I. How to remove the links

1. Wearing the watch on your wrist, determine how many links you want to remove. As a guide to determine the appropriate length of the band, you should be able to fit one finger comfortably between the band and your wrist.

2. Using the included tool, push out the pin on the side of the link that is marked on the underside of the link. As illustrated, insert the tip of the tool into the outer hole of the connecting part of the band, and the link will no longer be pushed. The pin will be pushed out. If the pin will not come out, bend the band for a few more times and do it over again.

### II. How to hold the band

Hold the band as illustrated above so that the links are secured, making it easy for you to work on them.

- **Parts used to adjust the band length**
  - **Individually**
  - **To be used to set the pin to the correct position**
  - **To be used to remove the pin from the link**

### III. How to connect the links

1. Securely insert the spring bar into the inner hole as shown in the illustration.
2. Bend the band outward, and slowly push the pin in.
3. With the tip of the shorter head of the tool, push the pin in until it is set to the correct position.

### IV. Save the removed links, pins, spring bars and tool.

- **Correct positions of the pins**
  - Make sure that the pins are set to their correct positions, or they may fall out while the watch is worn.
  - After completing the length adjustment, wear the watch on your wrist and check if the band fits your wrist.
  - If the band does not fit your wrist, repeat the process 2 or 3 of A and 1 or 2 of B to adjust the length.

### Notes

- When adjusting the length of the band, please be careful not to hurt your hands or fingers with the pins, spring bars at the edge of the tool.
- Please follow the instructions carefully as rough handling of the parts (pins and spring bars) may cause deterioration of the parts.
- Do not remove the parts for purposes other than the length adjustment as parts might be lost or distorted if they are repeatedly attached or removed.
- Parts of the band (pins and spring bars) are identical. Parts used for the removed links can be used as replacements for lost or distorted parts.
- The design of the band shown in this instruction manual may differ slightly from the band of the watch you purchased. Even in this case, you can still follow the instructions because the structure of the band and its connecting parts are the same.

### Keep the instruction manual

- The instruction manual is a very valuable guide and should be kept together with the band.
